

Table 1: Median estimated $\log \widehat{\text{HR}}_p(l)$ over 300 replicates, bootstrap-percentile interval coverage (target 0.95), the width of the empirical sampling interval (*true width*, the 2.5/97.5 percentile range of the point estimates over the replicates) and the average width of the per-replicate bootstrap percentile interval (*est. width*), by estimator, true weighting shape, and lag l .

Method	Scenario	Lag l	Median $\log \widehat{\text{HR}}_p(l)$	Coverage	True width	Est. width
Knot-search	Unimodal	1	0.0069	0.783	0.0025	0.0026
